

Techo 4Ever

instructions for use

Instructions for the use and maintenance of the W.O.T. office system

The 4Ever desk system is intended for the furnishing of administrative workplaces (desks and conference tables). When designing this system attention was paid to appearance, functionality as well as the standard wear and tear it would be subject to in the office environment. It is nevertheless necessary to adhere to the given guidelines when using the 4Ever system.

Description

The 4Ever desk system is constructed from two basic materials, a metal base and a wood-based desktop. The individual desks are available with the option of cable management accessories - both plastic and fabric with Velcro.

Metal Base

The base is a metal welded construction from closed steel and aluminium profiles and aluminium castings. The individual components are connected with fasteners. The surface is finished with a high-quality epoxy-polyester powder coating.

Desktops

The 4Ever desktops are produced from 18mm thick MFC with a 2mm thick ABS edge in the same colour as the desktop.

Principles of use

- Correct functioning of the system is dependent on its use in a standard office environment with respect to humidity, dust content in air etc. The products must be handled with due care so as to avoid the risk of physical damage;
- Do not move sharp objects across the desktop;
- Do not stand or sit on the desktops;
- Refrain from performing any activities on the desktop that could result in its damage (e.g. cutting paper, repair work etc.);
- Clean the surfaces with standard non-abrasive cleaning agents (we recommend standard detergents diluted with water), do not use any organic or inorganic solvents;
- Lacquered/varnished parts are to be treated with standard non-abrasive furniture polishes and waxes;
- Assembly and dismantling with subsequent assembly must be done by trained personnel only;
- Do not lift the desk by holding onto the desktop;
- Any spilt liquids should be wiped up immediately and the desktop dried.
