

Benefits

- › Embellishing (existing) walls using an upholstered panel system
- › Excellent acoustics thanks to the stuffing and upholstery
- › Functional use of a (existing) wall using function-specific elements
- › A total concept: an attractive acoustic wall where the designer has complete freedom in terms of composition, size and form, materials, colours, look and function
- › Optimum space usage without requiring additional space
- › Can be used or extended one panel at a time, ranging from a single panel or a row of panels to fully upholstered walls
- › A wall is created from soft panels, and you can lean against it while phoning or talking to others or sit on it while working – it is truly a living wall
- › The panels can be arranged and exchanged flexibly, depending on the purpose the area fulfils and the user's activity
- › Thanks to the fact that different materials and colours can be incorporated in the wall, the architect is challenged to create a unique wall
- › Designer Frans van der Wielen, designed in 2010

Ahrend Living Wall

Frans van der Wielen

Designer **Frans van der Wielen**

“The idea for the Ahrend Living Wall stems from an understanding that a “standing culture” has come into being. Having a brief chat, getting a quick drink, checking emails, surfing the internet, telephoning, etc. What is noticeable is that when people stand they want to lean on or against something. In most cases people lean against the wall. That made me think of designing a soft wall that will make all these activities as pleasant as possible. Moreover, it is also an advantage that the wall can now be actively used.”

Range

Ahrend Living Wall

Basic

- › Modular wall panelling system, consisting of:
 - Stainless steel wall rail system
 - 50 mm high skirting board, if located on the floor
 - MDF panels with cold-cure foam

Features

- › Panels: 800 x 400 mm
- › Noise damping
- › Interchangeable

Options

- › Can be customised

CSR

Ahrend aspires to become the most sustainable company in its sector in Europe. It aims to close the full production loops and engage in climate-neutral production by 2020, using the principles of Eco Design and Cradle-to-Cradle. The key element in this is the efficient use (and reuse) of materials.
